INTRODUCTION

Public transportation is an essential part of daily life for students, commuters, tourists, and office workers. However, transportation information in Malaysia is often distributed across multiple platforms, making it difficult for users to search for stations, compare transport options, and plan their journeys efficiently. Smart Transit MY is developed to provide a centralized platform that integrates Malaysian Government Open Data, enabling users to easily access transportation information and make informed travel decisions.

OBJECTIVE

- Develop a Flutter mobile application.
 - Utilize Malaysian Government Open Data.
 - Improve accessibility to public transportation information.
 - Support SDG 9 through digital innovation.
- 

PROBLEM

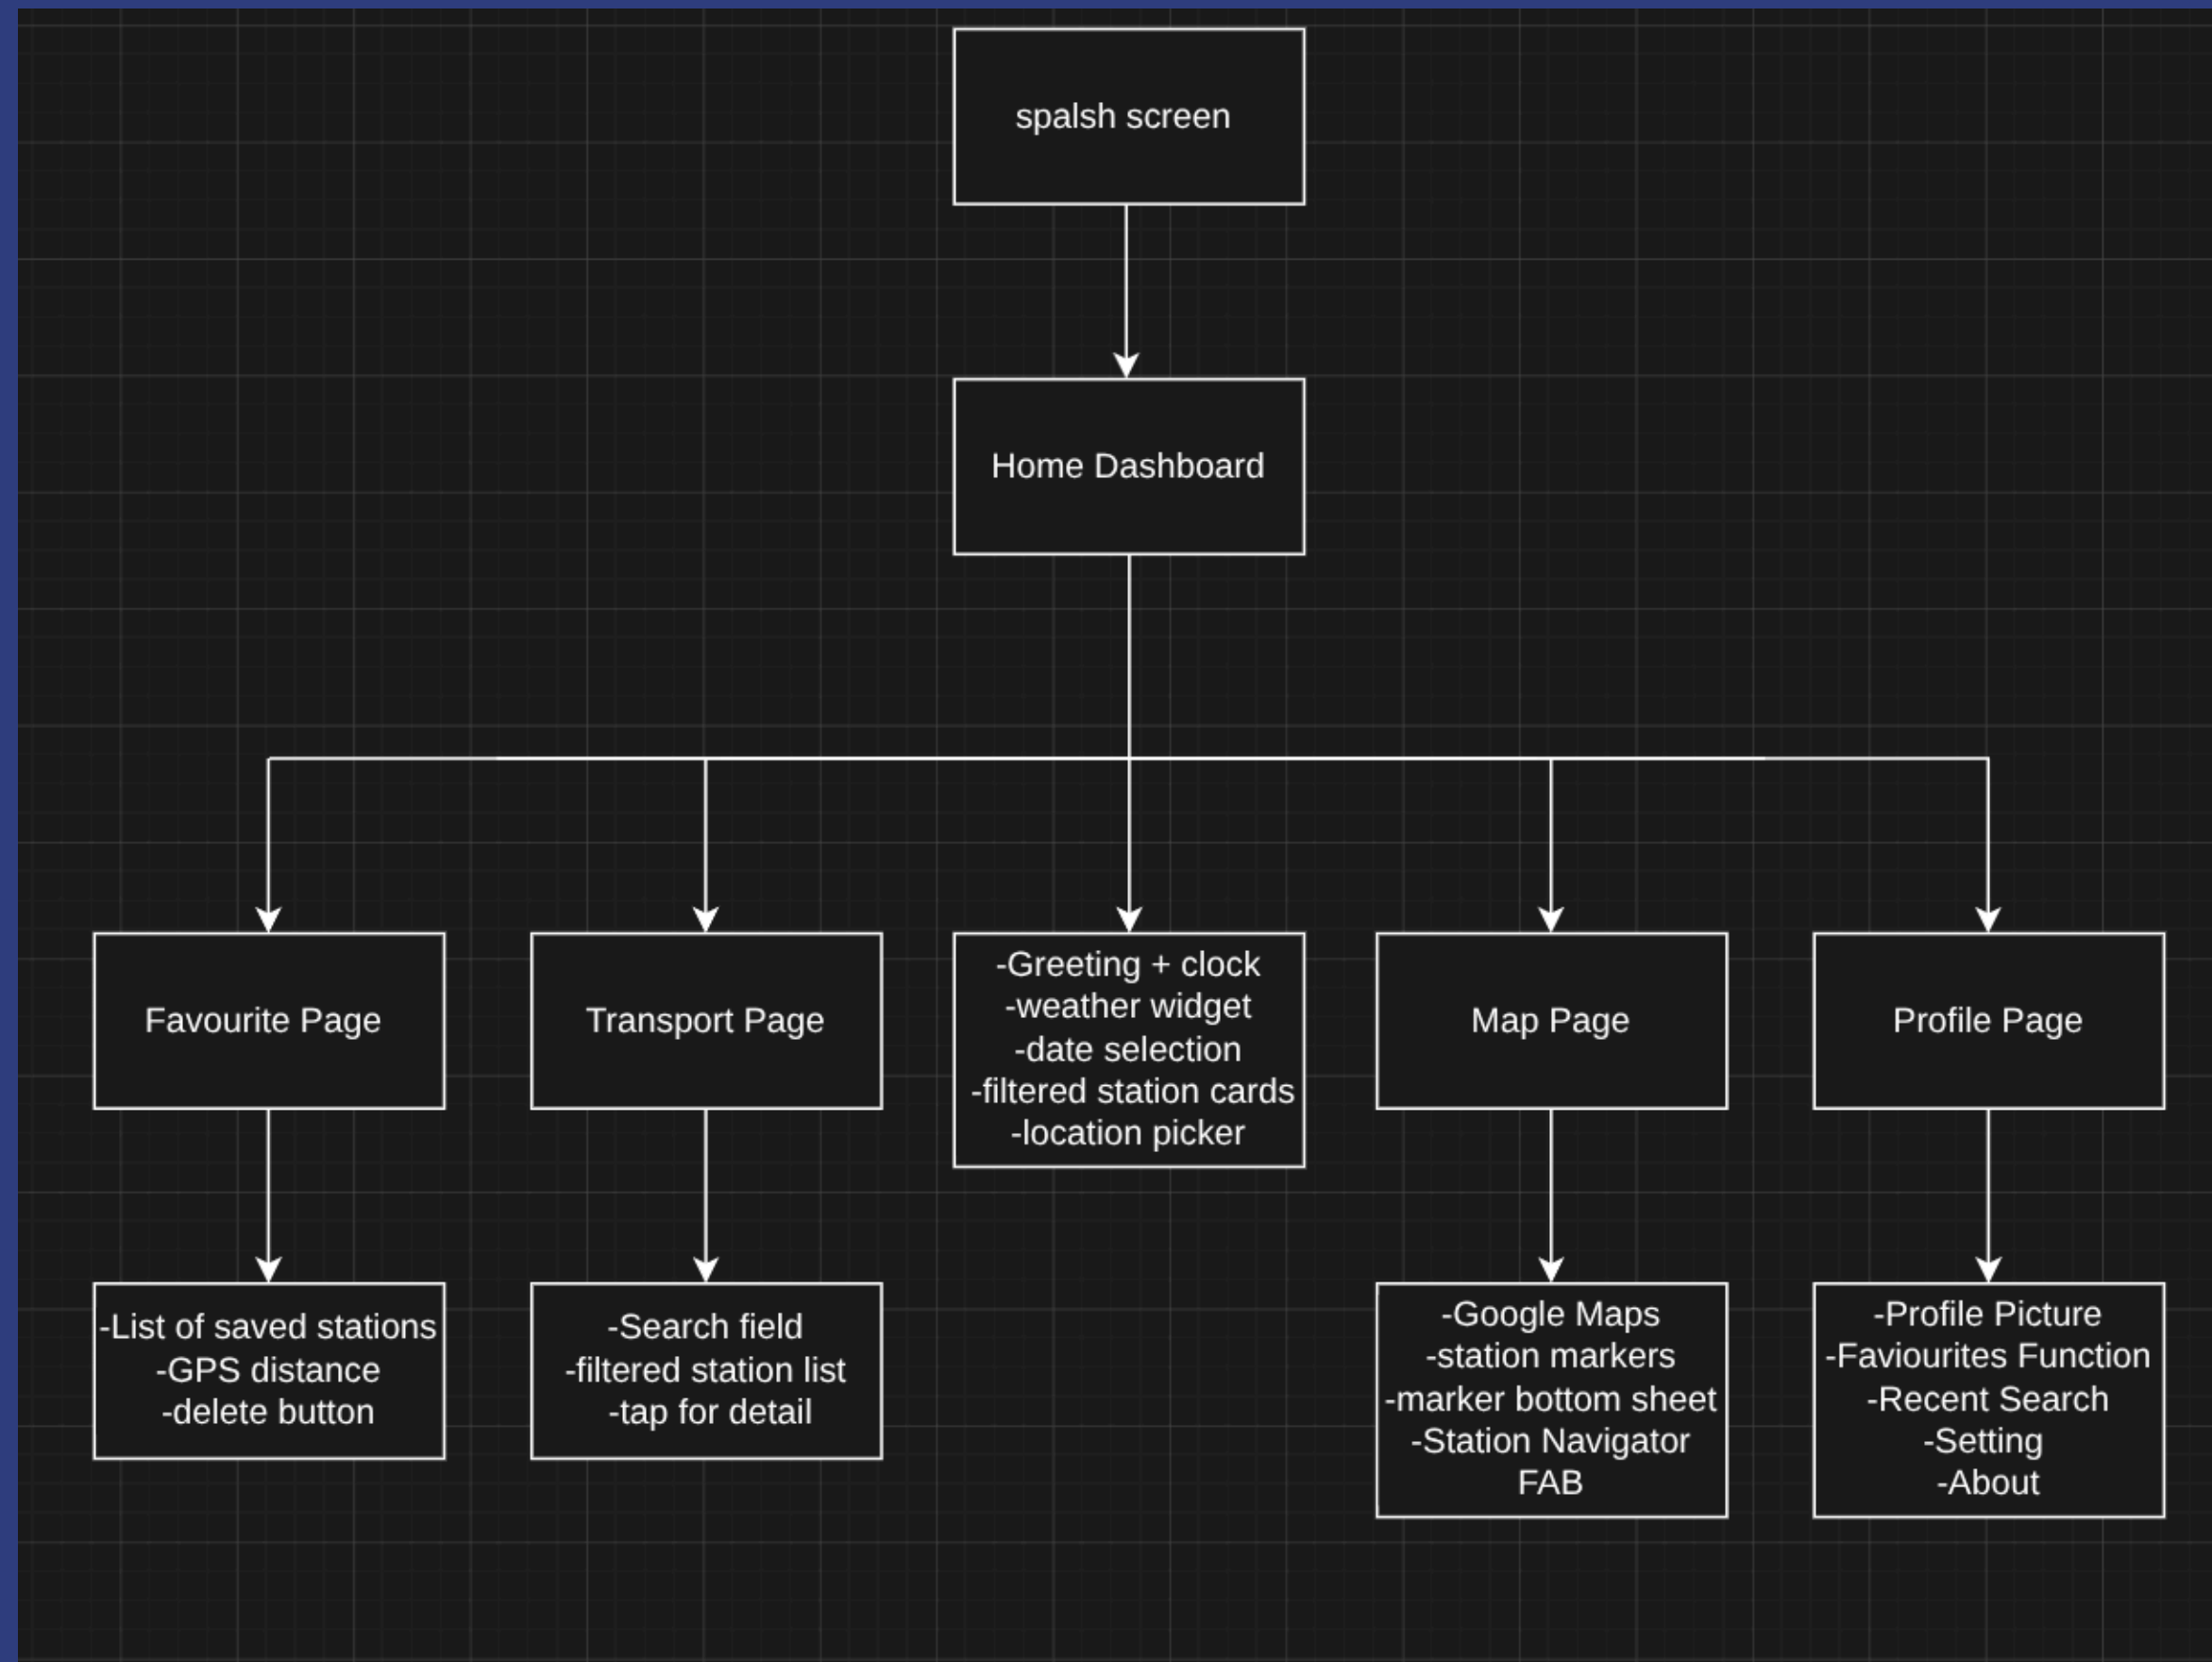

- Transport information is scattered across different platforms.
- Users struggle to locate nearby transport stations.
- Difficult to compare transport options.
- Users are unsure of the latest departure and arrival times of nearby public transport.
- Planning a journey using public transport can be confusing, especially for new users or tourists.
- Users need to check weather conditions before travelling.

SOLUTION

- Centralize transport information in one application.
- Display nearby stations using GPS and Google Maps.
- Allow users to search and filter by transport type.
- Display the latest available departure and arrival schedules from the government dataset.
- Provide a Journey Planning feature that recommends the route to a transport station
- Integrate a Weather Check feature to display current weather information within the application.

NAVIGATION STRUCTURE CHART

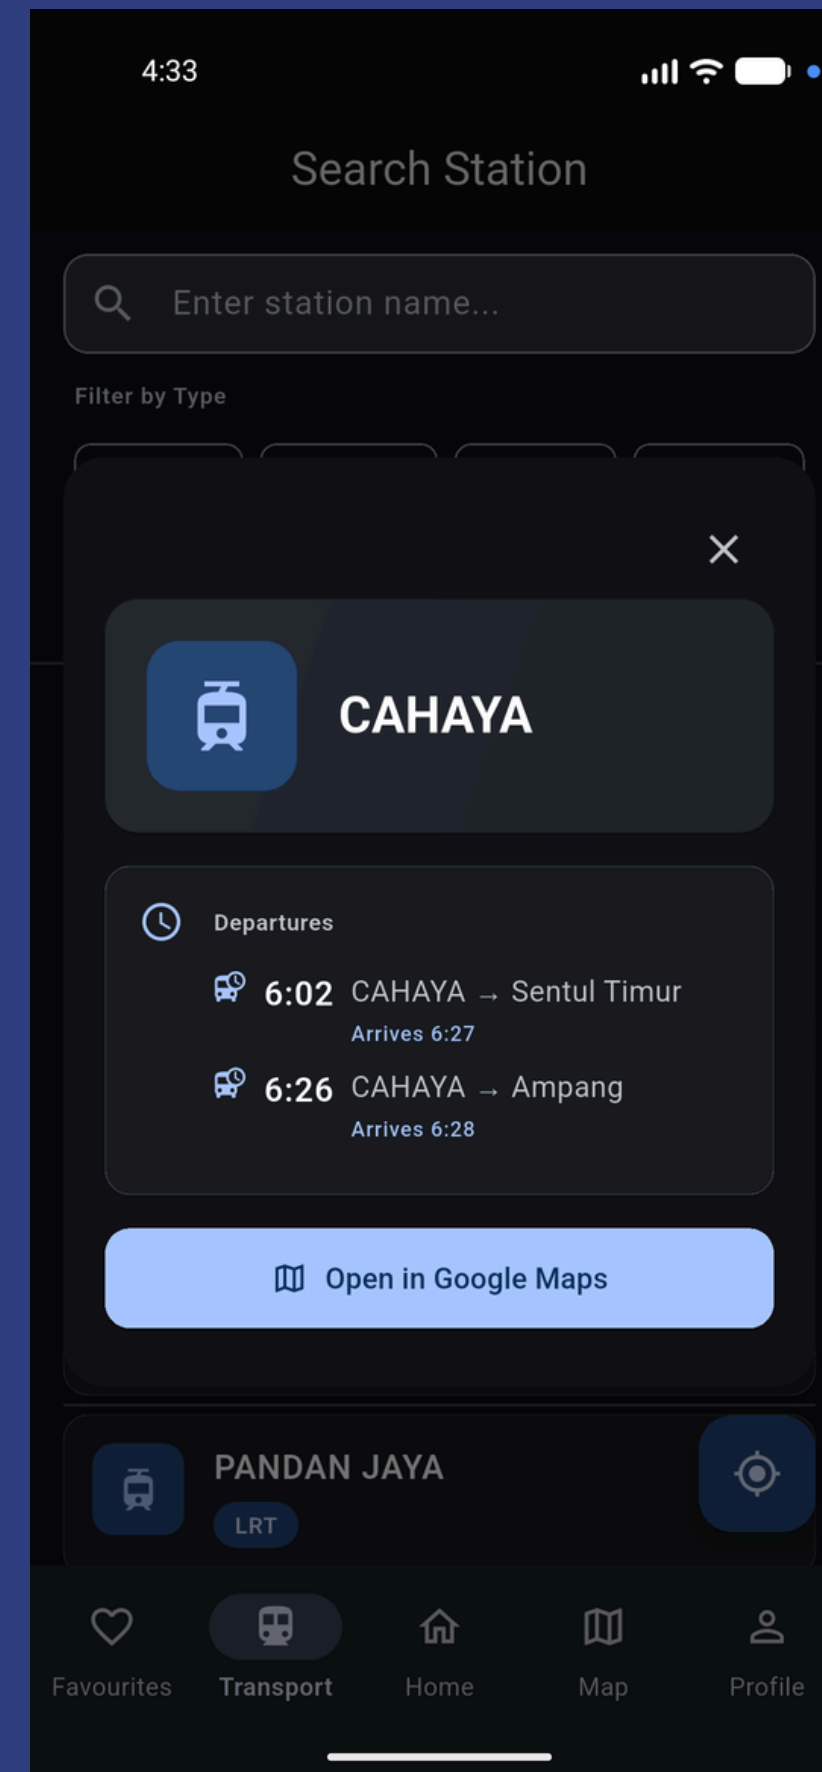

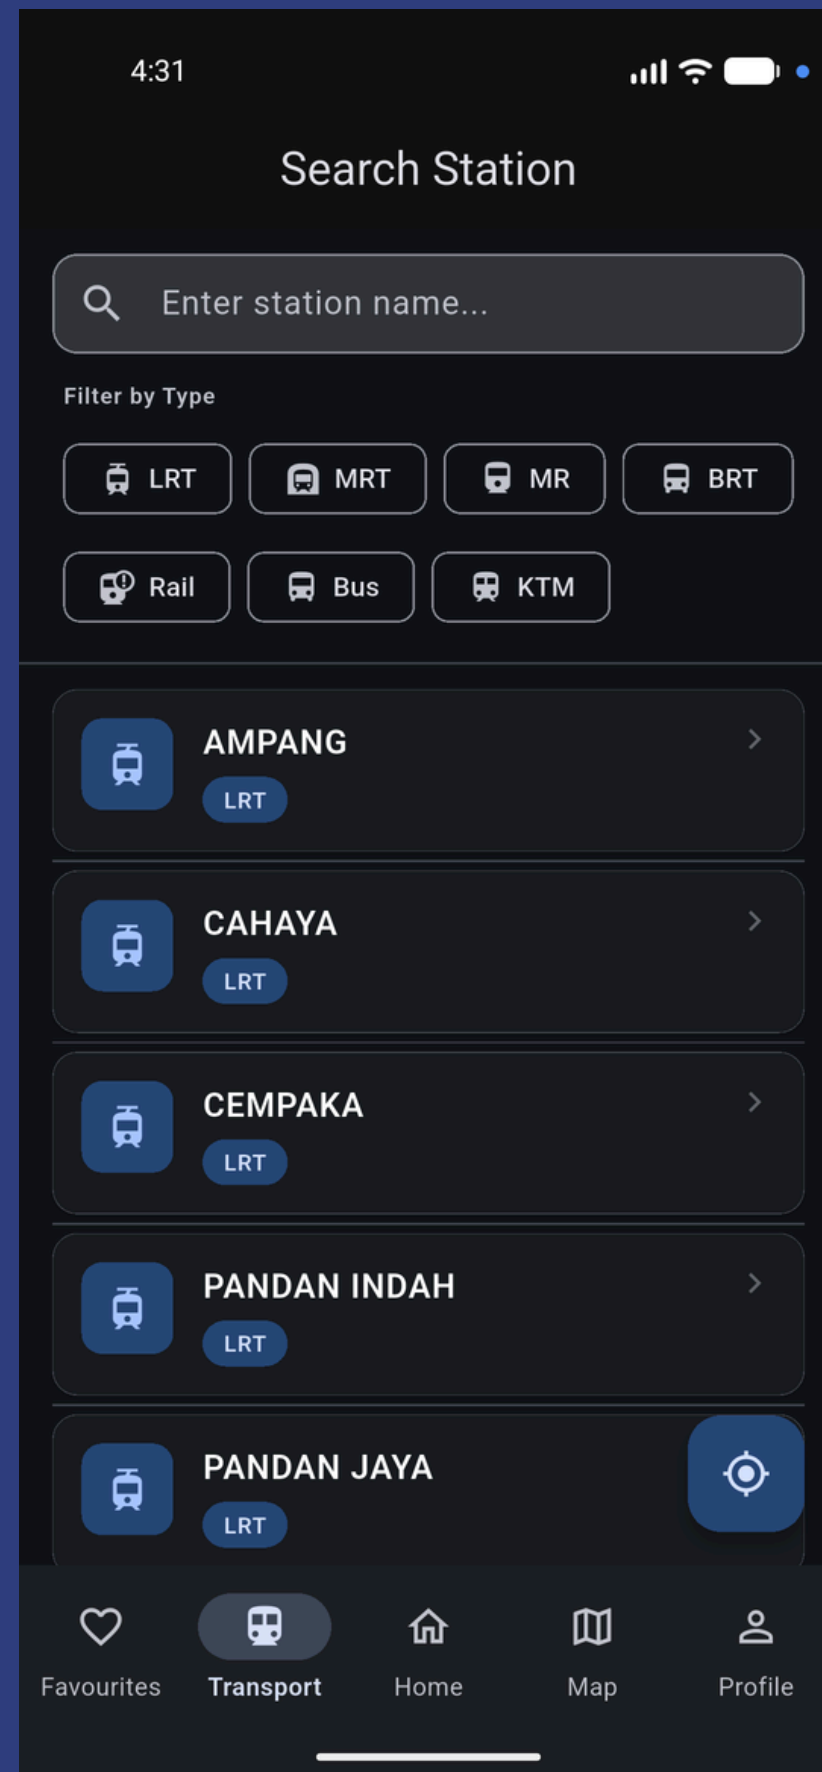

TEAM MODULE DISTRIBUTION

MEMBER	MODULE	RESPONSIBILITY
1. ALVIN	HOME AND NAVIGATION	SPLASH SCREEN, HOME DASHBOARD, UI NAVIGATION, UI THEME
2. CHONG	TRANSPORT INFORMATION	GOVERNMENT OPEN DATA INTEGRATION, SEARCH, STATION DETAILS
3. CHAI	MAP AND JOURNEY PLANNING	GOOGLE MAPS, NEARBY STATIONS, JOURNEY PLANNING
4. POONG	USER MANAGEMENT	PROFILE, FAVORITES, SETTINGS, LOCAL STORAGE
